Software Developer

DATA DRIVEN UI/UX DESIGN | DATABASE MANAGEMENT | DEEP LEARNING

If you're a human, my portfolio is easier to read :)

RELEVANT EXPERIENCE

Limex Labs LLC, February 2024 to present, full time

Fast-paced side hustle startup building custom front-end and back-end web-based software solutions. I am the owner and lead developer responsible for self-directed software development, the software development lifecycle (SDLC), Agile development, finance, customer success, and client acquisition on our current project, RV Gumshoe. I use **Node.js** and **Python** to manage and optimize our back-end server-side logic. I build the user-interface with **React**, **Tailwind CSS**, and **HTML5**. To make data driven UX decisions, I use **Microsoft Clarity** and our internal logging system built with **JavaScript**. I use a **NoSQL Firestore** database for **JSON** data transfer, but I plan to migrate to **PostgreSQL** considering our growing data processing / querying requirements. I use **Firebase** for hosting, user authentication, and APIs. I use Git and GitHub for version control and CI/CD pipelines.

Dental Accessories, January 2024 to present, part time

Mid-sized **Shopify** eCommerce business selling dental supplies with a goal of providing free dental care 10,000 people in need. Our first mission trip will be building a popup dental clinic next year to Guadalajara, Mexico. I perform self-directed site maintenance, build reusable, user-friendly UI using **Liquid**, **HTML5**, and **CSS3**, optimize load times, and increase accessibility. I work closely with the CEO, COO, and marketing manager to optimize SEO and UX.

Leo Main, November 2023 to present, part time

Mid-sized **Shopify** eCommerce business that sells veneer wall panels. I am independently responsible for creating reusable, accessible UI with **CSS3**, **HTML5**, and **Liquid**, monitoring user activity to drive data-driven UX change, and maintaining the site. I report directly to the CEO to optimize SEO and UX.

Wall Music, February 2023 to June 2024, full time

A music streaming service for Discord built as a passion project. Engineered using **JavaScript** with the **Discord.js** library. Previous iterations of the Discord bot used **Python** with the **Discord.py** library. The Discord bot was meant to be integrated with the Wall Music web app, built using **React** and the **Ionic Framework** and testing with **Jest**. I engineered **CI/CD pipelines** with **GitHub Actions**. I used Git and GitHub for version control.

University, January 2021 to May 2024, full time

I studied hard to gain experience with Deep Learning, AI, SQL databases, object-oriented design, data visualization with JavaScript and D3.js, data structures and algorithms with Java, software development with Node.js, React, HTML, CSS3, and Tailwind CSS. Everything I learned has been used in real world applications, meaning my knowledge is not surface-level.

EDUCATION

B.S. in Computer Science - Software Engineering (GPA 3.32), University of Montana, May 2024

Exchange Semester in Informatik, Technische Universität Graz, Austria, 2023-2024

Hard skills

Python, JavaScript, TypeScript, Node.js, React, React Native, REST APIs, HTML5, CSS3, Tailwind CSS, Ionic Framework, Firestore (NoSQL), Relational Databases (PostgreSQL), R, Git, Visual Studio Code, Firebase, GCP (cloud functions, cloud scheduler...), D3, Vega Lite, Technical Planning (plantUML, draw.io), Documentation (Markdown), Debugging, Jest, CI/CD, UI/UX, Asynchronous Programming, front-end and back-end optimization

Soft skills

Attention to detail, leadership, fast learner, cultured (world traveler, lived abroad), analytics, problem solving, accountable, forward thinking, communication in English, entrepreneurial, enthusiastic to work, receptive to critical feedback, collaboration with cross-functional teams, empathetic to customers, independent worker, task prioritization, self-directed, dependable
